Application/Control Number: 10/810,880

Art Unit: 1614

Claims 1-9 are presented for examination.

Applicant's amendment filed May 20, 2005 has been received and entered.

Accordingly, the rejections made under obviousness-type double patenting and 35 USC 112, first paragraph as set forth in the previous Office action at pages 2-9 are hereby withdrawn because the applicant deleted formula II as the first compound of the instant composition comprising a first compound selected from formulae I or II and a second compound that is a cyclooxygenase-2 inhibitor (COX-2); and cancelled claims 20-28.

## **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,413,965. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patented application teaches a composition comprising an aldose reductase inhibitor (ARI) and a cyclooxygenase-2 inhibitor (COX-

Art Unit: 1614

2) wherein the COX-2 inhibitors are the same as applicant; and the present application teaches a composition comprising a compound from formula I (an ARI) and the second compound a (COX-2). Clearly, the patented application's broad ARI compounds encompass the present application's narrowed ARI since ARI compounds are interchangeable.

Claims 1-9 are not allowed.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification does not reasonably provide enablement for a pharmaceutical composition comprising a first compound of formula I and a second compound that is a cyclooxygenase-2 inhibitor (COX-2).

In this regard, the application disclosure and claims have been compared per factors indicated in the decision <u>In re Wands</u>, 8 USPQ2d 1400 (Fed. Cir., 1988) as to undue experimentation.

Application/Control Number: 10/810,880 Page 4

Art Unit: 1614

The factors include:

1) the quantity of experimentation necessary

2) the amount of direction or guidance provided

3) the presence or absence of working examples

4) the nature of the invention

5) the state of the art

6) the relative skill of those in the art

7) the predictability of the art and

8) the breadth of the claims

The specification fails to provide guidance that would allow the skilled artisan background sufficient to practice that instant invention without resorting to undue experimentation in view of further discussion below.

The nature of the invention, state of the prior art, relative skill of those in the art and the predictability of the art

The claimed invention relates to a pharmaceutical composition comprising a first compound of formula I and a second compound that is a cyclooxygenase-2 inhibitor (COX-2).

The relative skill of those in the art is generally that of a Ph.D. or M.D.

The present invention is unpredictable unless experimentation is shown for the combination of the two compounds into a single composition.

## The breadth of the claims

The claims are very broad and inclusive to all compounds of formula I combined with all the compounds that are cyclooxygenase-2 inhibitors.

The amount of direction or guidance provided and the presence or absence of working examples

There are no examples showing the instant pharmaceutical composition comprising a first compound of formula I and a second compound that is a COX-2 into a single composition

## The quantity of experimentation necessary

Applicants have failed to provide guidance as to show the combination of the first compound of formula I and a second compound that is a COX-2 inhibitor into a pharmaceutical composition and the level of experimentation needed to determine the instant composition is undue.

Claims 1-9 are not allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin E. Weddington whose telephone number is (571)272-0587. The examiner can normally be reached on 11:00 am-7:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Low can be reached on (571)272-0951. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
